

Cover Letter

Dear Hiring Manager,

I am excited to apply for the software engineer position at Sysdig. With a solid background in cloud technologies, automation testing, and software development, I am eager to contribute to Sysdig's mission of leading cloud security globally.

In my previous roles, I have developed a robust skill set that aligns well with Sysdig's requirements. As a Software Engineer Intern at Hodek Vibration Technologies, I led a team to implement automation testing scenarios, significantly reducing testing time by 60%. This experience has equipped me with a solid understanding of test frameworks such as Pytest and a keen ability to collaborate effectively with engineering teams to solve complex problems.

My hands-on experience with cloud providers like AWS and my proficiency in Python make me well-suited for this role. For instance, at Bricshub.com, I designed a dynamic website leveraging blockchain technology for carbon credit accounting, which was hosted on AWS EC2. This project not only honed my skills in cloud technologies but also in developing secure and scalable applications.

I am confident that my technical skills, proactive approach, and passion for cloud security will enable me to contribute effectively to Sysdig. I look forward to the opportunity to discuss how my background and skills align with Sysdig's goals.

Thank you for considering my application. Please find my resume attached.

Warm regards,

Sanat Paranjape
